Study on

INDUSTRY AND INVESTMENT PROSPECT OF OIL PALM IN INDONESIA, 2009

THE PRICE OF CPO shrank under the impact of the global financial crisis beginning in September, 2008. Demand for that commodity fell in international markets. Based on official record of the Central Bureau of Statistics (BPS), the country's CPO exports in the first quarter of 2009 were valued only at US\$912.4 million, down 54% from US\$1.98 billion in the same period in 2008.

How is the development result and growth that have been reached by Indonesia in the area of plantation and industry of oil palm processing in the last few years? How is the seeding effort? And what are the roles of Indonesian oil palm to world's oil palm, either seen from its production, exports, its import and also consumption and its trading system?

Other important matters being discussed in this study are the growth that will happen at palm plantations in Indonesia in years to come, level of investment enthusiasm in this sector including the projection of plantation either government owned company property or private sector as well as the opening activity of new plantations which have been supported by the government. Other than that, problems which will happen in the world market will also be discussed.
